

Dear ladies and gentlemen,

The SkillsUSA Championships 2018 in Louisville are starting next week! On June 25, 2018 students from all over the country will gather in Kentucky. Besides various other challenges the automotive students will have to show their knowledges and skills of hybrid and electric vehicles on [our trainer](#), which is completely aligned to the ASE L3 curriculum.

You are an automotive teacher and you would like to know more about our trainer? We will be happy to welcome you at our booth (S219 S221) during the SkillsUSA show.

Your students are going to take part in the competition and you haven't had the chance to prepare them for hybrid and electric vehicles so far? We have prepared free video tutorials to help you out!

Watch the free tutorial:

NOW AVAILABLE

The new trainer "Diagnosing and Maintaining a High Voltage Battery" covers the next step of electrical vehicle technology: Safe handling and diagnostics as on a real car.

See you at the show!
